JUN 16

Pankaj Agrawal 🕢 · 7:18 AM

Let's do the guest lecture on Jun 24 as the week after is a Canada Day. I will flip you the course structure, let's do CI/CD best practices, learnings, your journey into Meta, how Software Engineering course like this helped you despite it's vagueness (it may help some more positive feedback).

Pankaj Agrawal 🤡 · 8:12 AM

Hey Man, good to hear from you! All good and hope all is well at your end as well!

APR 8

Would you be open for guest lecture for C01 in summer

I have tried Aryan , and he's been bailing me for 2 semesters LOL

Navinn Ravindaran (He/Him) • 9:38 AM

Awesome! I honestly miss being a TA lol

Pankaj Agrawal 🕢 • 1:29 PM

We can talk more about what you would like to cover .. I haven't prepared full summer schedule yet but would be around third/fourth week of June

I can always play around the date, depending upon your availability

Navinn Ravindaran 🕢 (He/Him) • 5:22 PM

Pankaj: We can talk more about what you would like to cover .. I haven't prepared full summer schedule yet but would be around third/fourth week of June

Perfect, mid-late June works well for me

Everyone always asks "Who's there?" But never "How's there? ...

About me

- SWE @ Meta
 - Server Eng; Instagram GenAl
 - PHP/Hack
 \(\sum_{\text{\color}} \), Python, React
- UTSC CS '24
 - CS TA: B07 (x2), B20, **C01**, C09, D01
 - Co-ops: CaseWare, Halo, RBC, HubSpot, AmEx
 - MLH Fellowship
- been coding since i was 5

haha chatgpt meme

Caffeine Induced / Code Disasters

noun

The phenomenon where a developer's over-reliance on caffeinated beverages leads to a temporary boost in productivity, followed by a series of coding mishaps that require extensive debugging and troubleshooting.

CONTINUOUS

INTEGRATION

CONTINUOUS

DEPLOYMENT

Prerequisites

- ✓ Pushing code changes (git push)
- ✓ Building/Compiling code (gcc, Mobile app builds, Generating static webpages)
- ✓ Testing code (Manual, Unit, E2E Integration)
- Deploying code
 - Static sites: GitHub Pages, Netlify, Cloudflare Pages, ...
 - Server(less): Vercel, Railway, Firebase, ...
 - Full-stack: Amazon Web Services, Google Cloud Platform, Azure, Heroku, ...

ME

This is Aryan (pretend)

- Just started his first new grad SWE role
- Doesn't know much about the team and the codebase they work on yet
- The codebase is **huge**: Thousands of files, rough idea on where to look
- Opened the repo, needs to make a small change

Aryan makes this change

```
<<GraphQLField(
   'comments_info',
   'Get comments for an IG Media (feed, story, reel)',
)>>
public function getComments(
   - ?IGMediaCommentsInfoInputObject $input,
   IGMediaCommentsInfoInputObject $input,
): ICommentsInfo;
```

Aryan tests the code change

```
[arypat@] ← hh
No errors!
[arypat@] ← meerkat
Starting Meerkat instance 60d43606-a864-43c4-82ba-35a31d34ba12
Calculating last good mergebase
Querying changed files
Resetting artifacts to mergebase
Running rebuild steps
Updating source control

Meerkat finished in 105.48 seconds
```

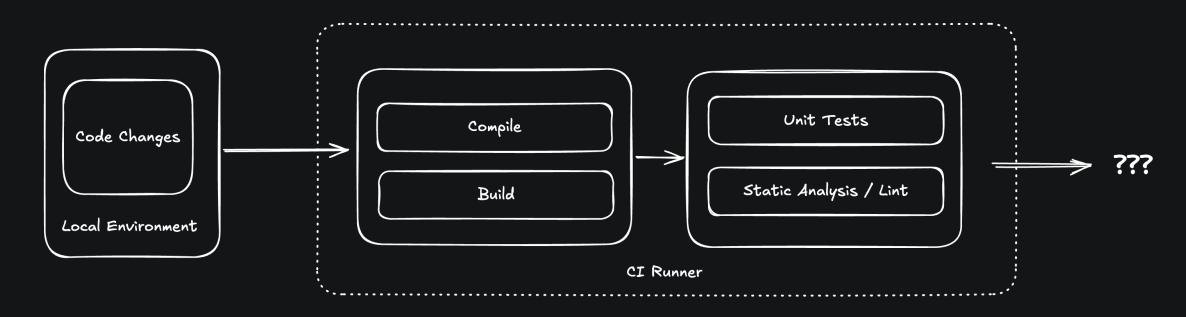

IT'S SHOWTIME!

Looking good, he pushes the change: https://www.internalfb.com/diff/D77156122

Things to think about

- Remember, Aryan just started.
- How long did it take to code → test → push?
- What would happen if there was no CI?
- How long would it have taken to test 'everything' manually?
 - Could he do that?
 - **Should** he do that?

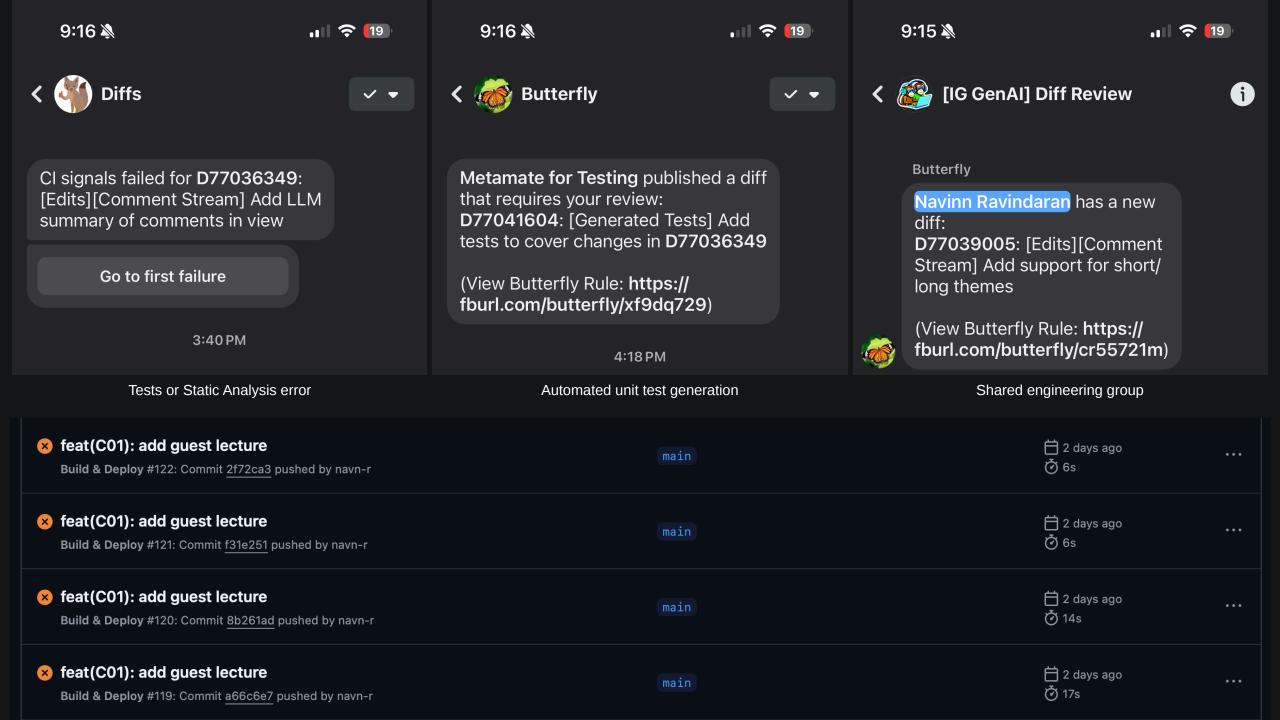

FLOW SO FAR...

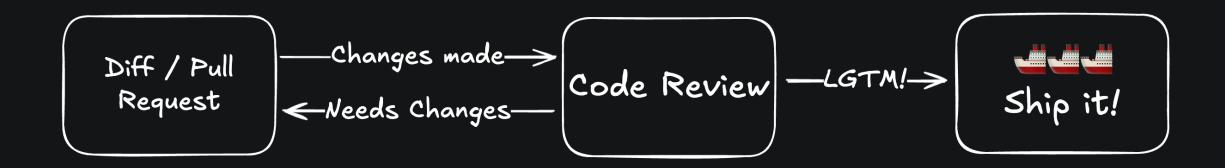

TL;DR: Automated service to quickly test code changes and detect errors early

Additional CI Capabilities

- Static Analysis
 - Code Coverage
 - Security Vulerability Scanning (leaking env. variables, secrets)
- Build/Test Artifacts
 - Log of passing/failing tests
 - Screenshots of UI changes end-to-end
- Async/Offline Triggers
 - Sending notifications
 - Database schema changes
 - Sending notifications on failure/success

After CI Passes

DEPLOYMENT

- Depends on the company / team / project / architecture
- Staggered Rollout
 - i. α / Development (latest, unstable, main)
 - ii. Staging (test , qa , staging)
 - iii. Production (prod , stable)
- Types of Deployment:
 - A/B: Experiment between two versions, see metrics and choose
 - Blue/Green: Run both, then instant swap
 - Canary: Gradual release based on % of population
 - Rolling: Gradual release based on # of services

To Conclude

```
Code \Rightarrow Test \Rightarrow Build \Rightarrow Review \Rightarrow Deploy \Rightarrow Pray nothing breaks
```

- The earlier you set it up, the more it helps
- Bad CI/CD is worse than none, only run what you need to
- Don't reinvent the wheel
- Green check ≠ Things look good (sometimes)
- CI/CD and Devops at scale usually someone else's responsibility, but understand it

now for the

Disclaimer: My experiences and opinions are solely my own. Every job is different. Majority of my co-op experience was during the pandemic

Transition to New Grad

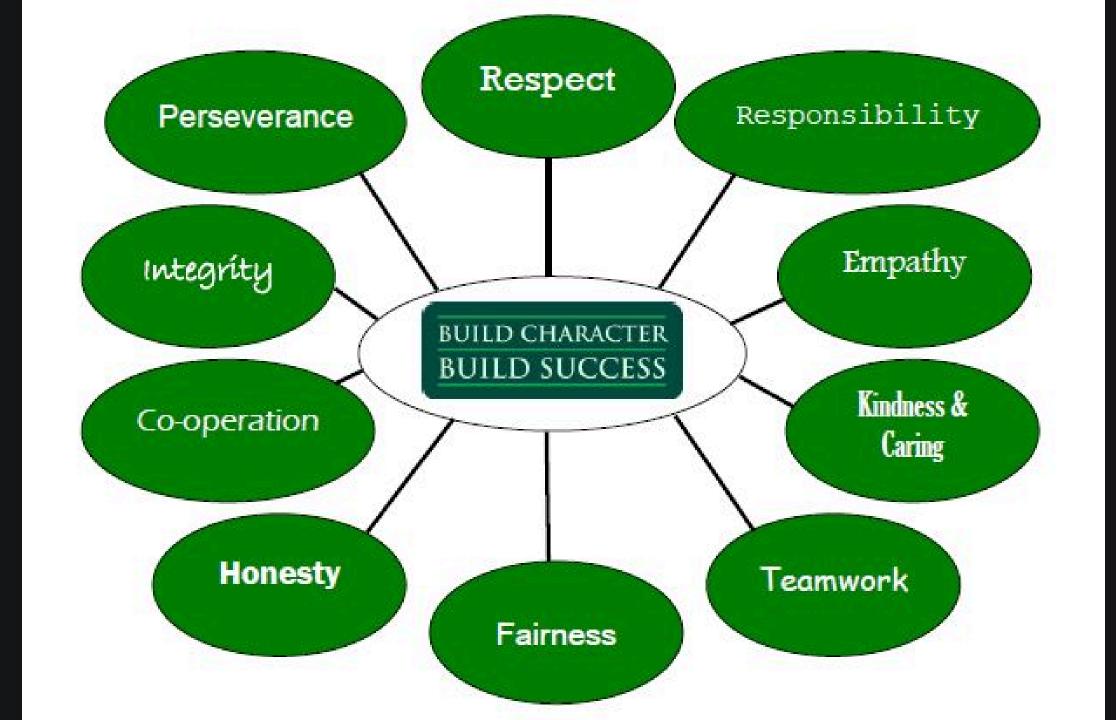

- The Scale
 - 1% of users can mean 100k+
 - The impact of the work, and the pride/responsibility to own the work
- A different Growth Mindset
 - Short term targets versus long term growth
 - More than just a resume point
 - This is the 'return offer'
- Office Politics and understanding the company + industry
 - "Treated as a full-time member of the team"
- (Evergreen) Imposter Syndrome and Fear over the market

Lessons that helped me

- 1. Strong Opinions, Weakly Held
 - o uhhhhhhh idk I'm not sure but I think we should...
 - Agile mindset over Agile Development
- 2. Tradeoffs. Tradeoffs. Tradeoffs.
 - Clean Code vs. Working Code
 - Strong programmer vs. Strong Engineer
 - If you think there's no tradeoffs, TIME is the tradeoff
- 3. Thinking like an Owner/Maintainer
 - You're not handing over projects to someone else anymore
 - "Hey I'm reaching out because you worked on this feature a couple years back, wondering if you still have context on it?"

Lessons that helped me (cont.)

- 4. Imitation is the sincerest form of flattery
 - Find someone that you can aspire to work like
 - How do they approach problems? How do they communicate?
 - Re: Friends
- 5. Work affects Life affects Work ...
 - Work Life Balance is hard, but it's individual
 - Sometimes we will eat sh*t, but sometimes it'll be really chill
 - The reward is the journey, and our perception of it all is important
- 6. Breadth vs. Depth in University
 - You might not get the chance for breadth
 - Keep your options open

Closing Thoughts

Why this course matters.
